In addition to supporting the open-source software, Continuum®, One Energy Analytics's Renewable Energy Services also develops and freely distributes a wind energy educational curriculum using Continuum®, including regularly posted instructional videos aimed at helping new Continuum® users.

Courses are offered for various educational levels from high school to graduate students. Beginner lessons prepare students entering the wind energy industry by providing students with the basics of wind energy resource assessment and project development. More advanced lessons challenge the students with various modeling techniques to gain a more in-depth knowledge of the science behind wind energy modeling. Click the links below to download the curriculum or to view the educational videos.
